

EIGER 25

by Steve Behrends, NAR 20974

PLANS ARE FULL SIZE

The Eiger (German for ogre)-25 is a competition Gnat or 1/4A Boost/Glider. This model has taken first place in every contest in which it has been entered, once attaining a 75-second duration (with a little help from a thermal). Without a thermal, a well-built model can be expected to consistently turn in 40 to 50-second times.

Build and finish the Eiger in your favorite manner. I recommend the use of Titebond glue for construction.

RECOMMENDED ENGINE
1/4A3-4T
